1. A renewable stored energy generating apparatus comprising a fully contained and stand-alone container, said container containing one or more storage batteries for providing auxiliary power when required, one or more renewable energy sources connected to said storage batteries, a water filtration system being connected to an inlet of a pump, means for operating said pump by said storage batteries, an outlet of said pump is connected to an inlet of a fresh or salt water filter, said water filter includes an outlet that is connected to a water dispensing device, said apparatus is ready for operation except for a deployment of said renewable energy sources.

2. The apparatus of claim 1, wherein said renewable energy source comprises solar panels.

3. The apparatus of claim 1 including a first water holding tank connected to said outlet of said filter for storing filtered water therein.

4. The apparatus of claim 1 including a second water holding tank for receiving water to be filtered.

5. The apparatus of claim 1 including means for connecting said storage batteries to 12-Volt DC outlets.

6. The apparatus of claim 1 including means for converting said auxiliary power to a 110-Volt AC system.

7. The apparatus of claim 6 including means for connecting said 110-Volt AC system to 110-Volts AC outlets.

8. The apparatus of claim 1, wherein said water filtration system comprises a reverse osmosis system.

9. The apparatus of claim 1, wherein said water filtration system comprises a desalination system.

10. A water filtration apparatus that is self-contained within a stand-alone container, said apparatus including a renewable energy source located on said container and collecting electrical energy which is channeled to electric storage batteries, said electric batteries are electrically connected to a pump, said pump delivering water to a succession of filters from a storage tank, said pump further delivering filtered water from said filters to a holding tank and from there to a dispenser when needed

11. The apparatus of claim 10, wherein said renewable energy source includes one or more solar energy collector panels.

12. The apparatus of claim 10, wherein said succession of filters is part of a reverse osmosis system.

13. The apparatus of claim 10, wherein said succession of filters is part of a desalination system.

14. The apparatus of claim 1, wherein said container includes a multiple of panels which are fastened to a basic frame assembly.

15. The apparatus of claim 14, wherein said panels include two side panels, a rear panel, a front panel and a top cover panel.

16. The apparatus of claim 15, wherein said top cover has two openings at a top surface thereof and wherein a semicircular support element protrudes through each of said openings.

17. The apparatus of claim 16 including a frame support assembly having support struts and wherein at least struts are fastened to each of said semicircular support elements.

18. The apparatus of claim 17, wherein said frame support assembly forms a base for supporting said solar panels.
